

The image displays a side-by-side comparison of a proposed building. On the left is a 3D architectural rendering of a four-story structure. The ground floor features a light gray stone or brick facade with a large red double door and a smaller red-framed glass door. The upper floors have a mix of light gray horizontal siding and brown vertical siding. Each floor has multiple windows, and the second and third floors include balconies with white railings. The building is shown on a sloped site with a tree to the left and a dashed line indicating a property boundary. On the right is a photograph of an existing three-story brick building. This building has a prominent white bay window on the second floor and a red door on the ground floor. A car is parked in front, and a tree is visible to the right.
