SEWER ENGINEER'S REPORT

66 State Street Apartment Conversion 66 State Street

CITY OF ALBANY COUNTY OF ALBANY STATE OF NEW YORK

Applicant: Redburn Development, Inc.

Prepared by:

Hershberg& Hershberg Consulting Engineers and Land Surveyors

18 Locust Street Albany, NY 12203-2908 (518) 459-3096 Fax (518) 459-5683 hhershberg@aol.com

May 18. 2021

INTRODUCTION:

Hershberg & Hershberg, Consulting Engineers and Land Surveyors, were retained by Redburn Development, Inc. (hereinafter the "Applicant") to review water usage of the proposed 66 State Street Apartment Conversion. This report is for the consideration of the Department of Water & Water Supply and the City of Albany Planning Board.

DESCRIPTION OF EXISTING SITE:

PARCEL AREA

The existing parcel is Tax Map Parcel #76.42-3-6 known as No. 66 State Street with a site area of 10,261 SF or 0.24 Acres.

Fig. No. 1 - Aerial Photo of Site

DESCRIPTION OF INTENDED SITE DEVELOPMENT AND USE

Under the current application the Applicant is proposing to convert floors 2 through 4 from office space to 27 apartments which would have 36 bedrooms. The 10,261 first floor would be used for commercial space with the potential for a 1,000 SF coffee shop.

SEWAGE GENERATION

To establish the sewage generation from the site as redeveloped the *New York State Design Standards for Intermediate Sized Wastewater Treatment Systems (March 5, 2014)* is used to compute the Average Daily Flow. Based upon 50 GPD per bed (Method 3 Water Usage Data Hydraulic Loading Rates)¹ based upon the computation below from 132 apartments at 16-30 Sheridan Avenue by the same developer.

Computation of Average Water Use at 16-30 Sheridan Avenue
Data from bill from City of Albany Department of Water & Water Supply

Period		Water Used (CF)
3/4/20 to 7/1/20		97,100
		97,100
Total Days	118	
Daily Use (CF)		822,88
Daily Use (Gallons)		6,163
Usage in GPD per Apt (132)		46.69
For Report Value (GPD)		50

Fig. No. 1 – Establishing per Bedroom Use In addition to the residential usage, the 1,000 SF for a potential coffee shop would be primarily for takeout but an allowance of 10 seats at 35 GPD² per

¹ New York State Design Standards for Intermediate Sized Wastewater Treatment Systems (March 5, 2014), Pg. B-16

² Ibid., Page B-19

seat and the balance of the first floor (9,261 SF) at 0.1 G/SF/Day³.

The average sewage generation is computed utilizing *New York State Design Standards for Intermediate Sized Wastewater Treatment Works* as 2,726 GPD. Peak sewage generation is estimated at 400% of average sewage generation which is 10,194 GPD or 0.017 CFS. The pipe capacity of the 4'-6" diameter brick sewer of 182.53 CFS. (see Appendix No. 2). The peak flow from this project represents and insignificant 0.009% of the flowing full capacity of this pipe.

Sewage Generation 66 State Street

			Usage Per Unit per day(GPD)	Daily Use
<u>Use</u>	Unit	Value	See Notes 1-3	(GPD)
Apartments- Note 1	Bed	50	36	1800
Coffee Shop - Note 2	Seats	35	10	350
Retail/Commercial- Note 3	SF	0.1	9261	926.1
TOTAL ESTIMATED SE	WAGE GENERAT	ION		2726
Average Daily Sewage Genera	ition in GPD	2726		
Peak Sewage Generation in GPD at 400%		10904		
Average Daily Sewage General	ation in CFS	0.004		
Peak Sewage Generation in CFS		0.017

SEWER SYSTEM

The sanitary sewage from this site is tributary to a Central Area Sewer District as shown on the portion Sewer Atlas Sheet 31 reproduced below.

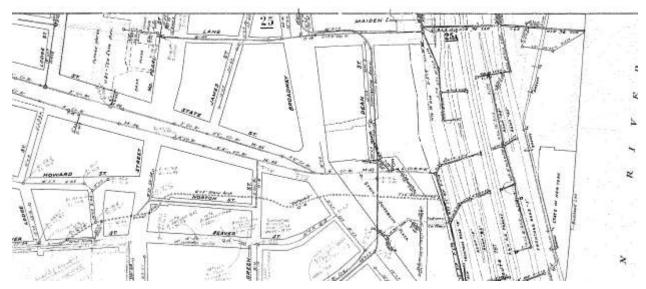

Fig. No. 3 – Portion of Sewer Atlas Sheet 31

The 4'6" diameter sewer is tributary to a 6' diameter sewer before entering a regulating chamber which control flows to the Intercepting Sewer. When the set amount of flow is exceeded the combined sewer discharges into a system constructed by New York State in connection with the construction of Interstate 787. When the system overflows it creates a Combined Sewer Overflow to the Hudson River.

DRY WEATHER FLOWS

In connection with another project, a flow meter was set at Dean Street and data recorded from February 16, 2018 through February 22, 2018. The tabular results are included in Appendix 3. They show that the average height of flow is 5.671 inches and the average flow is 2.505 MGD. Information provided by the Department indicates that the top of the dam is 1.6 feet (19.2 inches) above the pipe invert where the flow meter was set. The peak flow of 10,904 GPD represents

an insignificant 0.4% of the measured dry weather flow which would increase the dry weather flow to 5.893 inches.

CONCLUSION:

It is the Engineer's opinion that this project can be served by existing public sewer system with no negative on this system capacity during storm conditions and with no negative impact during dry weather flow conditions.

GENERAL NOTES

1. UNAUTHORIZED ALTERATION OR ADDITION TO A SURVEY MAP BEARING A LICENSED LAND SURVEYOR'S SEAL IS A MOLATION OF SECTION 7209—2, OF THE NEW YORK STATE EDUCATION LAW.

ONLY COPIES FROM THE ORIGINAL OF THIS SURVEY MARKED WITH THE LAND SURVEYOR'S SIGNATURE AND AN ORIGINAL EMBOSSED OR INK SEAL SHALL BE CONSIDERED VALID TRUE COPIES.

3. THIS SURVEY WAS PREPARED FOR THE PARTIES AND PURPOSE INDICATED HEREON, ANY EXTENSION OF THE USE BEYOND THE PARTIES OR PURPOSE INDICATED IS EXPRESSLY FORBIODEN WITHOUT WRITTEN RELEASE OR PERMISSION OF FRANCS G. McCLOSKEY, LICENSE No. D49441.

6. BUILDING CONTAINS WASTE AND RECYCLABLES; SEE ARCHITECTURAL PLANS FOR BUILDING INTERIOR.

NO PARKING ON SUBJECT PARCEL.
METERED PARKING MONDAY THROUGH FRIDAY
IN FRONT OF PARCEL ON STATE STREET.

RENOVATION NOTE

1. UPPER FLOORS TO BE RENOVATED INTO 27 MARKET-RATE APARTMENTS. MINOR IMPROVEMENTS TO EXISTING LOWER LEVEL COMMERCIAL SPACE. NO SITE IMPROVEMENTS PLANNED.

MIN. FRONT YARD MIN. SIDE YARD MIN. REAR YARD MAX. BUILDING HEIGHT MAX. LOT COVERAGE

FLOOD NOTE: By graphic plotting only, this property is in Zone(s)

35001001940 of the Flood Insurance Rate Map. Community Panel No.
35021001940 on the Rate Map. Community Panel No.
35122015 and is not in a Special Flood Hazard Area. By telephone call stated 42020201, to the National Flood Insurance Program (800-538-6520) we have isomed this community deep/sees not currently participate in the program. No field surveying was performed to determine this zone and an elevation certificate may be needed to verify this determination or apply for a variance from the Federal Emergency Management Agency.
